AB In order to improve the water solubility of some previously reported immunoactive dioxothiadiazabicyclo[3.3.0]octanes, we synthesized a series of new diazabicyclo[3.3.0]octanols from the trans-4-hydroxy-L-proline Me ester in two steps. Acylation of the ester with an isocyanate or an isothiocyanate under the appropriate conditions afforded N-acylated derivs. exclusively. Then through a cyclization process in the presence of sodium methylate, bicyclic derivs. were obtained, most of them as a mixture of two diastereomers which were separated by column chromatog. A mitogenic stimulation assay using the T-cell mitogen phytohemagglutinin was performed with human peripheral blood leukocytes in the presence of the different synthesized compds. and with levamisole as reference Several compds. showed marked stimulant effects on the proliferation of lymphocytes as compared to levamisole, but no correlation could be established between mol. configuration and stimulation or inhibition effects on proliferation.
